

Pharmaceutical / Medicinal Chemistry

Lecture-Nr.: 53801

Type: lecture

Duration: over 4 semesters (2 lecture series by 2 professors): 2 x 2 hours (4 hours) per week (winter and summer semester)

Method of Assessment: written examination

ECTS Credit Points: 4 ECTS per semester; total 16 ECTS (over 4 semesters)

Topics:

Semester 1: Vitamins: vitamins A and E, retinoic acid and analogues; B vitamins and related; ascorbic acid. Antibacterial agents (except antituberkulotics): inhibitors of cell wall biosynthesis (beta lactams, cycloserin, fosfomycin, vancomycin and related glycopeptides); polypeptides interfering with the cytoplasmic membrane (e. g. gramicidines, polymyxines); inhibitors of bacterial protein biosynthesis (tetracyclines, aminoglycosides, macrolides and ketolides, lincosamides, chloramphenicol, steroid antibiotics, oxazolidinediones); inhibitors of bacterial gyrase (quinolones); inhibitors of the biosynthesis of nucleobases (sulfonamides, benzylpyrimidines); nitroimidazoles; nitrofurantoins; aminoacridines

Semester 2: Antimycobacterial agents: isoniazide, pyrazinamide; rifamycines; ethambutol; streptomycin; 2-alkylisonicotinthioamides; cycloserin, terizidon; para-aminosalicylic acid; antileprotic agents (rifampicin, dapson, clofazimin, thalidomide). Antimycotic agents: polyen antimycotics (amphotericin, nystatin); azole antimycotics (inhibitors of lanosterol-14 α -demethylase); inhibitors of squalene epoxidase (allylamines, thiocarbamates); further inhibitors of ergosterol biosynthesis (amorolfin); flucytosin and thymidilate synthase inhibition; ciclopirox. Antiprotozoic agents: antimalaria compounds. Anthelmintic drugs.

Semester 3: Analgetic, antiphlogistic and antipyretic compounds: biosynthesis of prostaglandins and prostanoids, COX and LOX pathway, clinically used prostaglandin derivatives, COX inhibitors of different chemical classes (reversible, irreversible), COX 2-selective inhibitors; opioid receptors and their ligands (agonists, partial agonists, antagonists), compounds closely related to the morphine structure, synthetic opioid receptor ligands; nefopam, flupirtin. Antidiarrhoic opioid receptor ligands. Antitussive drugs (central, peripheral, opioid and non-opioid structures). Secretolytics and mucolytics.

Semester 4: Hormones: Pancreatic hormones (insulins, glucagon), oral antidiabetic drugs, sweeteners; hypothalamic and adenohypophyseal peptide hormones and their antagonists, prolactin inhibitors; neurohypophyseal peptide hormones (vasopressins and oxytocin); thyroid hormones including calcitonin, thyreostatics; radioiodine, technetium diagnostics, radiopharmaceuticals; parathyreotrophic hormone; drugs for the treatment of osteoporosis, bisphosphonates; vitamin D and related hormones; steroid biosynthesis, glucocorticoids, mineralocorticoids, spironolactone; androgens; estrogens, antiestrogens; gestagens
